### THE ENGINEERING GAP

Standard monitoring flags what broke. TattvaLens builds a **Relationship Graph** to show you how to fix it. We map **Exposure Paths** and prioritize findings by actual ROI, eliminating dashboard fatigue.

### LENSE PIPELINE

PHASE\_01: Identity Bootstrap

PHASE\_02: Multi-Account Ingest

PHASE\_03: Graph Enrichment

### PROPRIETARY OPTIMIZATION LOGIC

$$\text{Score} = (\sum \text{SignalWeights} \times \text{Exposure}) \times \text{Age}$$

• **Compound Risk:** Public EC2 + Wildcard IAM escalates to 100 (CRITICAL).

• **Scalar Focus:** 2.0x multiplier for all internet-exposed assets.

### PLATFORM CAPABILITIES

#### Go Mono-Engine

Flat memory footprint even at 100k+ nodes. High-concurrency I/O optimization.

#### Action Ledger

Prioritized task list mapped directly to Terraform and CloudFormation fixes.

#### Compliance Ops

Automated mapping to CIS AWS, NIST 800-53, and SOC2 security controls.

### EXCLUSIVE SIGNAL BETA INVITATION
